GRAPE CRUSH REPORT OVERVIEW

Information contained in this Report was supplied by processors to fulfill the reporting requirements of Section 55601.5 of the Food and Agricultural Code.

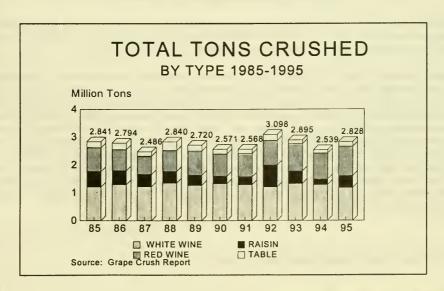

The Preliminary Grape Crush Report includes all grape tonnage crushed during the 1995 season. It also includes purchased tonnage and pricing information for grapes with final prices prior to January 10, 1996. The March 8, 1996 Final Grape Crush Report will include additional purchased tonnage and prices from reference price contracts that were in effect prior to January 1, 1977. In addition, the final report will contain any late reports or corrections to the preliminary report.

Details of the crushed tonnage, degrees Brix and weighted average prices were reported by grape type and variety as well as by grape pricing district. The 17 districts refer to the area in which the grapes were grown as defined in the Administrative Code. A district map is located on the inside of the front cover. Beginning with the 1995 crop, Muscat of Alexandria variety grapes are under white wine type grapes instead of raisin type grapes. The 1994 comparisons in this report also reflect this change.

SUMMARY OF GRAPE TONNAGES AND PRICES

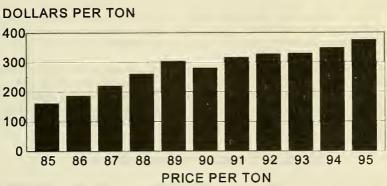

The 1995 crush totaled 2,827,603 tons, up approximately 11 percent from the 1994 crush, but 9 percent less than the record-large 1982 of 3,115,531 tons. White wine varieties continued to account for the largest share of all grapes crushed, at 1,174,894, down 9 percent from 1994. The 1995 red wine variety crush totaled 1,051,510 tons, up 12 percent from 1994. Tons crushed for raisin type varieties totaled 431,702, up 120 percent from 1994, while tons crushed for table type varieties totaled 169,498, up 38 percent from last year. (See chart below.)

California grape growers received an average price of \$374.35 per ton for grapes crushed in 1995, up 8 percent from the 1994 average price. This makes the 1995 price the highest on record. (See chart, page 2.) These price levels were not adjusted for inflation.

PRICE PAID PER TON

GROWER RETURN INCREASES

AVERAGE PRICE FOR ALL VARIETIES

LEADING GRAPE VARIETIES AND DISTRICTS

French Colombard, a white wine grape variety, continued its dominance with approximately 17 percent of the crush volume. Thompson Seedless was second place with 15 percent of the total crush. The remaining top ten were all wine varieties. (See chart, page 3.)

Grapes produced in District 4 (Napa County) received the highest average price of \$1,282.03 per ton, up 7 percent from 1994. District 3 (Sonoma and Marin counties) received the second highest return of \$1,121.79, up 14 percent from 1994. Of the grapes grown Statewide, the top five varieties receiving the highest average price were all wine grape varieties. Mataro received the highest average price of \$1,418.37 1/per ton. Petite Verdot received the second highest average price of \$1,412.36 per ton followed by Rousanne, at \$1,258.18 1/per ton, Viognier at \$1,242.03 per ton, and Sangioveto/Sangiovese at \$1,229.64. The 1995 Chardonnay price of \$896.62 was up 5 percent from last year, while the 1995 Cabernet Sauvignon price of \$872.03 was up 7 percent from last year. Continuing its upward movement from 1994, the 1995 average price for Zinfandel grapes rose to \$522.07, 10 percent higher than last year, but 36 percent lower than the 1988 high average price of \$817.48.

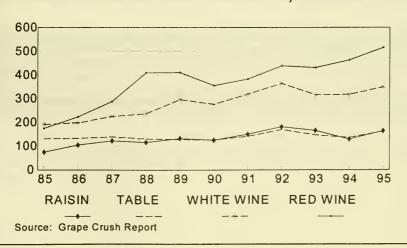

1/ These purchases involved less than 100 tons.

GRAPE PRICE PER TON BY TYPE OF GRAPE, 1985-1995

EXPLANATION OF TABLES

TABLE 1 is a <u>summary of the 1995 crop State totals</u> by grape type and varieties that are shown in detail by grape pricing districts in Tables 2 through 6. State totals and averages for 1994 are shown for comparison.

TABLE 2 includes over-the-scale fresh tonnage of all grapes crushed by California processors from the 1995 crop. Over-the-scale fresh weight tonnage includes materials other than grapes (MOG) and defects. This table is broken down by the 17 grape pricing districts and by variety. State totals for 1994 are shown for comparison. Crushed tonnage includes all grapes crushed whether: grown and crushed by processors; purchased and crushed by processors; crushed by cooperatives, juice manufacturers, etc.; or crushed for others, including growers.

TABLE 3 shows the <u>weighted average degrees Brix for all grapes crushed</u> (TABLE 2) by California processors from the 1995 crop. The weighted average degrees Brix is reported by grape pricing districts and variety. State averages for 1994 are shown for comparison.

TABLE 4 includes net weight fresh tonnage of all grapes purchased for wine, concentrate, juice, vinegar, and beverage brandy by California processors from the 1995 crop. Net weight fresh tonnage does not include material other than grapes (MOG) and defects or other weight adjustments deducted from gross weight. The purchased tonnage is reported by variety and grape pricing districts. State totals for 1994 are shown for comparison. TABLE 4 does not include tonnage purchased as distilling material other than beverage brandy, this is shown in TABLE 7. Prices for all tonnage shown in this table are final and not subject to change. Grapes pooled by cooperatives, those grown by processors and used for their own production and grapes crushed to growers' accounts are not included.

TABLE 5 shows the <u>weighted average degrees Brix for all grapes purchased for wine, concentrate, juice, vinegar, and beverage brandy</u> (TABLE 4) by California processors from the 1995 crop. The weighted average degrees Brix is reported by grape pricing districts and variety. State averages for 1994 are shown for comparison. TABLE 5 does not include degrees Brix of tonnage purchased as distilling material other than beverage brandy, this is shown in TABLE 7. Grapes pooled by cooperatives, those grown by processors and used for their own production and grapes crushed to growers' accounts are not included.

TABLE 6 gives the <u>weighted average price per ton</u>, <u>delivered basis</u>, <u>of all tonnage purchased for wine</u>, <u>concentrate</u>, <u>juice</u>, <u>vinegar</u>, <u>and beverage brandy</u> (TABLE 4) by California processors from the 1995 crop. The weighted average prices are reported by variety, and grape pricing districts. State averages for 1994 are shown for comparison. TABLE 6 does not include prices of tonnage purchased as distilling material other than beverage brandy, this is shown in TABLE 7. Prices shown in this table are final and not subject to change. Grapes pooled by cooperatives, those grown by processors and used for their own production and grapes crushed to growers' accounts are not included.

Weighted average prices reflect final prices through January 10, 1996 and include any Brix adjustments, bonuses or allowances. Prices from some reference price contracts written prior to January 1, 1977 may be included if settled by January 10, 1996. Prices are equivalent to delivered basis in the area grown including normal within-area hauling allowances. Purchases made on a roadside basis include the usual hauling allowance for local delivery in the area grown. Out-of-area purchases made on a delivered basis do not include extra hauling allowances for delivery outside the area.

The following example indicates the method used for calculating weighted averages:

Petite Sirah	1		- 3	20.5	19.0	389.5	20.5	19.0	389.50	450.0	19.0	25.0	+ or - 10%		22.0	24.0	24.0	418.50	8,579.25
Petite Sireh	1			10.6	23.5	249.1	10.6	23.5	249.10	450.0	19.0	25.0	+ or - 10%		22.0	20.0	24.0	517.50	5,485.50
Combined	1			186.6	20.6	3.841.9	131.1	20.2	2,648.6	450.0	19.0	25.0	+ or - 10%		22.0	20.0	24.0	385.31	50,514.75

Column 4 was obtained by dividing the total Over the Scale Tons (Column 3) into the Total Brix of these same tons (Column A): $\frac{3.841.9}{186.6} = 20.6$

Column 6 was obtained by dividing the Purchased Tons Only (Column 5) into the Total Brix of these same tons (Column B): $\frac{2.648.6}{131.1} = 20.2$

Column 15 was obtained by dividing the total Purchased Tons Only (Column 5) into the total dollars paid for these same tons (Column C): \$50,514.75 = \$385.31

TABLE 7 shows all grape tonnage purchased as distilling material other than beverage brandy by California processors from the 1995 crop. The tonnage, weighted average degrees Brix and price per ton are shown by grape type and variety. State totals and averages for 1994 are given for comparison.

TABLE 8 shows <u>base prices paid to growers</u> by Brix adjustment factors, purchased tonnage, type, variety and reporting district where grown. Weighted average base prices are included.

The Brix adjustment factors determine adjustments to base prices to compensate for sugar variations. In this report, adjustments are expressed in dollars per ton, or percent of base price per degree variance from the established Brix base. Occasional lots are traded on price per degree Brix as delivered.

by Price basis per degree Brix.
 c/ Price per degree Brix not included in weighted average base price.
 d/ All prices based on per degree Brix.

BRIX ADJUSTMENT FACTORS

The following Brix adjustment factors are on a per degree Brix basis and are normally calculated to a tenth of a degree, and are cumulative unless otherwise indicated. Most processors, however, indicate maximum and/or minimum Brix acceptance limits. Grapes testing above or below these limits may be subject to price renegotiation, acceptance for use other than for table wine, or rejection by the processors. Discounts for high sugar apply to both base price and bonus unless otherwise stated. There are factors other than Brix, such as material other than grapes (MOG), defects, weight loss in late harvest grapes, and sugar/acid ratios that affect grape prices. These were not considered in this presentation, unless otherwise stated, but were considered in arriving at weighted average prices.

GRAPE CRUSH REPORT OVERVIEW

Information contained in this Report was supplied by processors to fulfill the reporting requirements of Section 55601.5 of the Food and Agricultural Code.

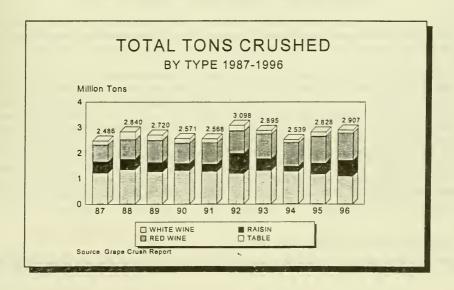

The Preliminary Grape Crush Report includes all grape tonnage crushed during the 1996 season. It also includes purchased tonnage and pricing information for grapes with final prices prior to January 10, 1997. The March 10, 1997 Final Grape Crush Report will include additional purchased tonnage and prices from reference price contracts that were in effect prior to January 1, 1977. In addition, the final report will contain any late reports or corrections to the preliminary report.

Details of the crushed tonnage, degrees Brix and weighted average prices were reported by grape type and variety as well as by grape pricing district. The 17 districts refer to the area in which the grapes were grown as defined in the Administrative Code. A district map is located on the inside of the front cover. Beginning with the 1996 crop year, Mouvedre variety grapes are combined with Mataro variety grapes. The 1995 comparisons in this report also reflect this change.

SUMMARY OF GRAPE TONNAGES AND PRICES

The 1996 crush totaled 2,907,277 tons, up approximately 3 percent from the 1995 crush, but 7 percent less than the record-large 1982 of 3,115,531 tons. White wine varieties continued to account for the largest share of all grapes crushed, at 1,094,845, down 7 percent from 1995. The 1996 red wine variety crush totaled 1,078,199 tons, up 3 percent from 1995. Tons crushed for raisin type varieties totaled 617,659, up 43 percent from 1995, while tons crushed for table type varieties totaled 116,574, down 31 percent from 1995. (See chart below.)

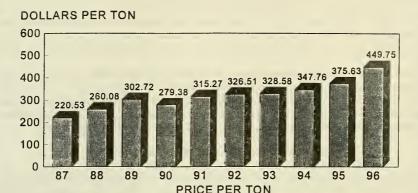

California grape growers received an average price of \$449.75 per ton for grapes crushed in 1996, up 20 percent from the 1995 average price. This makes the 1996 price the highest on record. (See chart, page 2.) These price levels were not adjusted for inflation.

LEADING GRAPE VARIETIES AND DISTRICTS

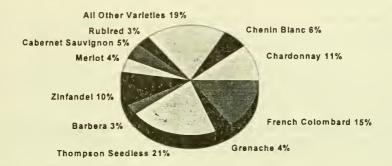

Thompson Seedless, a raisin grape variety, replaced French Colombard as the variety accounting for the largest percentage of crush volume, 21 percent. French Colombard fell to second place with 15 percent of the total crush. The remaining top ten were all wine varieties. (See chart, page 3.)

Grapes produced in District 4 (Napa County) received the highest average price of \$1,508.85 per ton, up 18 percent from 1995. District 3 (Sonoma and Marin counties) received the second highest return of \$1,358.84, up 21 percent from 1995. Of the grapes grown Statewide, the top five varieties receiving the highest average price were all wine grape varieties. Teroldego received the highest average price of \$1,720.48 1/ per ton. Petit Verdot received the second highest average price of \$1,560.41 per ton followed by Rousanne, at \$1,457.39 1/ per ton, Greco at \$1,400.00 1/ per ton, and Malbec at \$1,381.84. The 1996 Chardonnay price of \$1,131.08 was up 27 percent from 1995, while the 1996 Cabernet Sauvignon price of \$1,095.30 was up 26 percent from 1995. Continuing its upward movement from 1995, the 1996 average price for Zinfandel grapes rose to \$563.72, 8 percent higher than 1995, but 31 percent lower than the 1988 high average price of \$817.48.

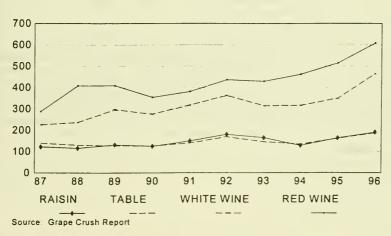

1/ These purchases involved less than 100 tons.

GRAPE PRICE PER TON BY TYPE OF GRAPE, 1987-1996

EXPLANATION OF TABLES

TABLE 1 is a <u>summary of the 1996 crop State totals</u> by grape type and varieties that are shown in detail by grape pricing districts in Tables 2 through 6. State totals and averages for 1995 are shown for comparison.

TABLE 2 includes over-the-scale fresh tonnage of all grapes crushed by California processors from the 1996 crop. Over-the-scale fresh weight tonnage includes materials other than grapes (MOG) and defects. This table is broken down by the 17 grape pricing districts and by variety. State totals for 1995 are shown for comparison. Crushed tonnage includes all grapes crushed whether: grown and crushed by processors; purchased and crushed by processors; crushed by cooperatives, juice manufacturers, etc.; or crushed for others, including growers.

TABLE 3 shows the <u>weighted average degrees Brix for all grapes crushed</u> (TABLE 2) by California processors from the 1996 crop. The weighted average degrees Brix is reported by grape pricing districts and variety. State averages for 1995 are shown for comparison.

TABLE 4 includes net weight fresh tonnage of all grapes purchased for wine, concentrate, juice, vinegar, and beverage brandy by California processors from the 1996 crop. Net weight fresh tonnage does not include material other than grapes (MOG) and defects or other weight adjustments deducted from gross weight. The purchased tonnage is reported by variety and grape pricing districts. State totals for 1995 are shown for comparison. TABLE 4 does not include tonnage purchased as distilling material other than beverage brandy, this is shown in TABLE 7. Prices for all tonnage shown in this table are final and not subject to change. Grapes pooled by cooperatives, those grown by processors and used for their own production and grapes crushed to growers' accounts are not included.

TABLE 5 shows the <u>weighted average degrees Brix for all grapes purchased for wine, concentrate, juice, vinegar, and beverage brandy</u> (TABLE 4) by California processors from the 1996 crop. The weighted average degrees Brix is reported by grape pricing districts and variety. State averages for 1995 are shown for comparison. TABLE 5 does not include degrees Brix of tonnage purchased as distilling material other than beverage brandy, this is shown in TABLE 7. Grapes pooled by cooperatives, those grown by processors and used for their own production and grapes crushed to growers' accounts are not included.

TABLE 6 gives the <u>weighted average price per ton, delivered basis, of all tonnage purchased for wine, concentrate, juice, vinegar, and beverage brandy</u> (TABLE 4) by California processors from the 1996 crop. The weighted average prices are reported by variety, and grape pricing districts. State averages for 1995 are shown for comparison. TABLE 6 does not include prices of tonnage purchased as distilling material other than beverage brandy, this is shown in TABLE 7. Prices shown in this table are final and not subject to change. Grapes pooled by cooperatives, those grown by processors and used for their own production and grapes crushed to growers' accounts are not included.

Weighted average prices reflect final prices through January 10, 1997 and include any Brix adjustments, bonuses or allowances. Prices from some reference price contracts written prior to January 1, 1977 may be included if settled by January 10, 1997. Prices are equivalent to delivered basis in the area grown including normal within-area hauling allowances. Purchases made on a roadside basis include the usual hauling allowance for local delivery in the area grown. Out-of-area purchases made on a delivered basis do not include extra hauling allowances for delivery outside the area.

The following example indicates the method used for calculating weighted averages:

Combined	1			186 6	20.6	3.841.9	131.1	20.2	2,648.6	450.0	19.0	25.0	+ or - 10%		22.0	20.0	24.0	385.31	50.514.75

Column 4 was obtained by dividing the total Over the Scale Tons (Column 3) into the Total Brix of these same tons (Column A): $\frac{3,841.9}{186.6} = 20.6$

Column 6 was obtained by dividing the Purchased Tons Only (Column 5) into the Total Brix of these same tons (Column B): $\frac{2.648.6}{131.1} = 20.2$

Column 15 was obtained by dividing the total Purchased Tons Only (Column 5) into the total dollars paid for these same tons (Column C): $\frac{$50,514.75}{131.1} = 385.31

TABLE 7 shows all grape tonnage purchased as distilling material other than beverage brandy by California processors from the 1996 crop. The tonnage, weighted average degrees Brix and price per ton are shown by grape type and variety. State totals and averages for 1995 are given for comparison.

TABLE 8 shows <u>base prices paid to growers</u> by Brix adjustment factors, purchased tonnage, type, variety and reporting district where grown. Weighted average base prices and total purchased tonnage are included.

The Brix adjustment factors determine adjustments to base prices to compensate for sugar variations. In this report, adjustments are expressed in dollars per ton, or percent of base price per degree variance from the established Brix base. Occasional lots are traded on price per degree Brix as delivered.

				unighted av	arage bace r	orice or tot	alc

The following Brix adjustment factors are on a per degree Brix basis and are normally calculated to a tenth of a degree, and are cumulative unless otherwise indicated. Most processors, however, indicate maximum and/or minimum Brix acceptance limits. Grapes testing above or below these limits may be subject to price renegotiation, acceptance for use other than for table wine, or rejection by the processors. Discounts for high sugar apply to both base price and bonus unless otherwise stated. There are factors other than Brix, such as material other than grapes (MOG), defects, weight loss in late harvest grapes, and sugar/acid ratios that affect grape prices. These were not considered in this presentation, unless otherwise stated, but were considered in arriving at weighted average prices.

The following Brix adjustment factors are on a per degree Brix basis and are normally calculated to a tenth of a degree, and are cumulative unless otherwise indicated. Most processors, however, indicate maximum and/or minimum Brix acceptance limits. Grapes testing above or below these limits may be subject to price renegotiation, acceptance for use other than for table wine, or rejection by the processors. Discounts for high sugar apply to both base price and bonus unless otherwise stated. There are fectors other than Brix, such as meterial other than grapes (MOG), defects, weight loss in late harvest grapes, and sugar/acid retios that affect grape prices. These were not considered in this presentation, unless otherwise stated, but were considered in arriving at weighted average prices.

The following Brix adjustment factors are on a per degree Brix basis and are normally calculated to a tenth of a degree, and are cumulative unless otherwise indicated. Most processors, however, indicate maximum and/or minimum Brix acceptance limits. Graces testing above or below these limits may be subject to price renegotiation, acceptance for use other than for table wine, or rejection by the processors. Discounts for high sugar apply to both base price and bonus unless otherwise stated. There are factors other than Brix, such as material other than grapes (MOG), defects, weight loss in late harvest grapes, and sugar/acid ratios that affect grace prices. These were not considered in this presentation, unless otherwise stated, but were considered in arriving at weighted agrees prices.

The following Brix adjustment factors are on a per degree Brix basis and are normally calculated to a tenth of a degree, and are cumulative unless otherwise indicated. Most processors, however, indicate maximum and/or minimum Brix acceptance limits. Grapes testing above or below these limits may be subject to price renegotiation, acceptance for use other than for table wine, or rejection by the processors. Discounts for high sugar apply to both base price and bonus unless otherwise stated. There are factors other than Brix, such as material other than grapes (MOG), defects, weight loss in late harvest grapes, and sugar/acid ratios that affect grape prices. These were not considered in this presentation, unless otherwise stated, but were considered in arriving at weighted average prices.

GRAPE CRUSH REPORT OVERVIEW

Information contained in this Report was supplied by processors to fulfill the reporting requirements of Section 55601.5 of the Food and Agricultural Code.

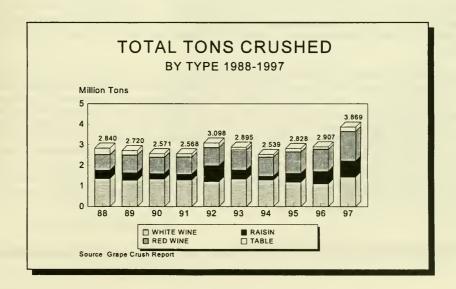

The Preliminary Grape Crush Report includes all grape tonnage crushed during the 1997 season. It also includes purchased tonnage and pricing information for grapes with final prices prior to January 10, 1998. The March 10, 1998 Final Grape Crush Report will include additional purchased tonnage and prices from reference price contracts that were in effect prior to January 1, 1977. In addition, the final report will contain any late reports or corrections to the preliminary report.

Details of the crushed tonnage, degrees Brix and weighted average prices were reported by grape type and variety as well as by grape pricing district. The 17 districts refer to the area in which the grapes were grown as defined in the Administrative Code. A district map is located on the inside of the front cover. Beginning with the 1996 crop year, Mourvedre variety grapes were combined with Mataro variety grapes.

SUMMARY OF GRAPE TONNAGES AND PRICES

The 1997 crush totaled 3,868,682 tons, up approximately 33 percent from the 1996 crush, and up 24 percent more than the previous record-large 1982 of 3,115,531 tons. This year, red wine varieties overtook white wine varieties and account for the largest share of all grapes crushed, at 1,446,948, up 34 percent from 1996. The 1997 white wine variety crush totaled 1,423,653 tons, up 30 percent from 1996. Tons crushed for raisin type varieties totaled 785,671, up 27 percent from 1996, while tons crushed for table type varieties totaled 212,409, up 82 percent from 1996. (See chart below.)

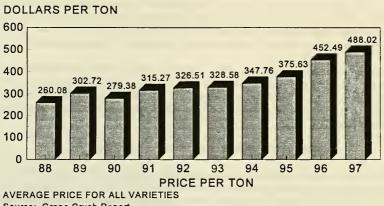

California grape growers received an average price of \$488.02 per ton for grapes crushed in 1997, up 8 percent from the 1996 average price. This makes the 1997 price the highest on record. (See chart, page 2.) These price levels were not adjusted for inflation.

LEADING GRAPE VARIETIES AND DISTRICTS

Thompson Seedless, a raisin grape variety, continued to account for the largest percentage of crush volume, 20 percent. Chardonnay replaced French Colombard as the second leading percentage of crush with 13 percent of the total crush. The remaining top ten were all wine varieties. (See chart, page 3.)

Grapes produced in District 4 (Napa County) received the highest average price of \$1,716.67 per ton, up 14 percent from 1996. District 3 (Sonoma and Marin counties) received the second highest return of \$1,571.99, up 16 percent from 1996. Of the grapes grown Statewide, the top six varieties receiving the highest average price were all wine grape varieties. Teroldego received the highest average price of \$1,800.00 1/per ton. Petit Verdot received the second highest average price of \$1,762.37 per ton followed by Rousanne, at \$1,741.70 per ton, Pinot Noir at \$1,539.21 per ton, and both Tannat and Greco at \$1,500.00 1/per ton. The 1997 Chardonnay price of \$1,150.52 was up 2 percent from 1996, while the 1997 Cabernet Sauvignon price of \$1,114.95 was up 2 percent from 1996. Reversing its upward movement from 1996, the 1997 average price for Zinfandel grapes dropped to \$498.26, 12 percent lower than 1996, and 39 percent lower than the 1988 high average price of \$817.48.

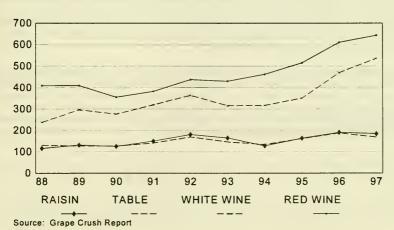

1/ These purchases involved less than 100 tons.

GRAPE PRICE PER TON BY TYPE OF GRAPE, 1988-1997

EXPLANATION OF TABLES

TABLE 1 is a <u>summary of the 1997 crop State totals</u> by grape type and varieties that are shown in detail by grape pricing districts in Tables 2 through 6. State totals and averages for 1996 are shown for comparison.

TABLE 2 includes <u>over-the-scale fresh tonnage of all grapes crushed</u> by California processors from the 1997 crop. Over-the-scale fresh weight tonnage includes materials other than grapes (MOG) and defects. This table is broken down by the 17 grape pricing districts and by variety. State totals for 1996 are shown for comparison. Crushed tonnage includes <u>all grapes crushed</u> whether: grown and crushed by processors; purchased and crushed by processors; crushed by cooperatives, juice manufacturers, etc.; or crushed for others, including growers.

TABLE 3 shows the <u>weighted average degrees Brix for all grapes crushed</u> (TABLE 2) by California processors from the 1997 crop. The weighted average degrees Brix is reported by grape pricing districts and variety. State averages for 1996 are shown for comparison.

TABLE 4 includes net weight fresh tonnage of all grapes purchased for wine, concentrate, juice, vinegar, and beverage brandy by California processors from the 1997 crop. Net weight fresh tonnage does not include material other than grapes (MOG) and defects or other weight adjustments deducted from gross weight. The purchased tonnage is reported by variety and grape pricing districts. State totals for 1996 are shown for comparison. TABLE 4 does not include tonnage purchased as distilling material other than beverage brandy, this is shown in TABLE 7. Prices for all tonnage shown in this table are final and not subject to change. Grapes pooled by cooperatives, those grown by processors and used for their own production and grapes crushed to growers' accounts are not included.

TABLE 5 shows the <u>weighted average degrees Brix for all grapes purchased for wine, concentrate, juice, vinegar, and beverage brandy</u> (TABLE 4) by California processors from the 1997 crop. The weighted average degrees Brix is reported by grape pricing districts and variety. State averages for 1996 are shown for comparison. TABLE 5 does not include degrees Brix of tonnage purchased as distilling material other than beverage brandy, this is shown in TABLE 7. Grapes pooled by cooperatives, those grown by processors and used for their own production and grapes crushed to growers' accounts are not included.

TABLE 6 gives the weighted average price per ton, delivered basis, of all tonnage purchased for wine, concentrate, juice, vinegar, and beverage brandy (TABLE 4) by California processors from the 1997 crop. The weighted average prices are reported by variety, and grape pricing districts. State averages for 1996 are shown for comparison. TABLE 6 does not include prices of tonnage purchased as distilling material other than beverage brandy, this is shown in TABLE 7. Prices shown in this table are final and not subject to change. Grapes pooled by cooperatives, those grown by processors and used for their own production and grapes crushed to growers' accounts are not included.

Weighted average prices reflect final prices through January 10, 1998 and include any Brix adjustments, bonuses or allowances. Prices from some reference price contracts written prior to January 1, 1977 may be included if settled by January 10, 1998. Prices are equivalent to delivered basis in the area grown including normal within-area hauling allowances. Purchases made on a roadside basis include the usual hauling allowance for local delivery in the area grown. Out-of-area purchases made on a delivered basis do not include extra hauling allowances for delivery outside the area.

The following example indicates the method used for calculating weighted averages:

Petite Sireh	1			20.5	19.0	389 5	20.5	19.0	389.50	450.0	19.0	25.0	+ or - 10%		22.0	24.0	24.0	418.50	8,579.25
Petite Sirah	1			10.6	23.5	249.1	10.6	23.5	249 10	450.0	19.0	25.0	+ or - 10%		22.0	20.0	20.0	517 50	5,485.50
Combined	1			186.6	20 6	3,841.9	131.1	20.2	2.648.6	450.0	19.0	25.0	+ or - 10%		22.0	20.0	24.0	385.31	50.514.75

Column 4 was obtained by dividing the total Over the Scale Tons (Column 3) into the Total Brix of these same tons (Column A): $\frac{3.841.9}{186.6} = 20.6$

Column 6 was obtained by dividing the Purchased Tons Only (Column 5) into the Total Brix of these same tons (Column B): $\frac{2.648.6}{131.1} = 20.2$

Column 15 was obtained by dividing the total Purchased Tons Only (Column 5) into the total dollars paid for these same tons (Column C): $\frac{$50,514.75}{131.1} = 385.31

TABLE 7 gives the <u>weighted average price per ton, delivered basis, of all tonnage purchased from non-related sources for wine, concentrate, juice, vinegar, and beverage brandy (TABLE 4) by California processors from the 1997 crop. The weighted average prices are reported by variety, and grape pricing districts. State averages for 1996 are shown for comparison. TABLE 6 does not include prices of tonnage purchased as distilling material other than beverage brandy, this is shown in TABLE 7. Prices shown in this table are final and not subject to change. Grapes pooled by cooperatives, those grown by processors and used for their own production and grapes crushed to growers' accounts are not included.</u>

Non-Related Purchased Tons: Excludes tonnage of grapes purchased from a grower if:

- (a) The grower or an affiliate of the grower, or both the grower and the affiliate of the grower, owned, directly or indirectly, at least 5 percent of the indicia of ownership or voting authority of the winery (processor);
- (b) The winery (processor) or an affiliate of the winery, or both the winery and the affiliate of the winery, owned, directly or indirectly, at least 5 percent of the indicia of ownership or voting authority of the grower;
- (c) The winery (processor) or an affiliate of the winery, or both the winery and the affiliate of the winery, provided long-term financing to the grower in exchange for rights or options to purchase a significant portion of the grower's harvest.

TABLE 8 shows base prices paid to growers by Brix adjustment factors, purchased tonnage, type, variety and reporting district where grown. Weighted average base prices and total purchased tonnage are included.

The Brix adjustment factors determine adjustments to base prices to compensate for sugar variations. In this report, adjustments are expressed in dollars per ton, or percent of base price per degree variance from the established Brix base. Occasional lots are traded on price per degree Brix as delivered.

TABLE 9 shows <u>all grape tonnage purchased as distilling material other than beverage brandy</u> by California processors from the 1997 crop. The tonnage, weighted average degrees Brix and price per ton are shown by grape type and variety. State totals and averages for 1996 are given for comparison.

a/ See code descriptions on next page.

b/ Price basis per degree Brix.

C/ Price per degree Brix not included in weighted average base price or totals.

d/ All prices based on per degree Brix.

TABLE 8 - SUPPLEMENT: BRIX ADJUSTMENT FACTORS

The following Brix adjustment factors are on a per degree Brix basis and are normally calculated to a tenth of a degree, and are cumulative unless otherwise indicated. Most processors, however, indicate maximum and/or minimum Brix acceptance limits. Grapes testing above or below these limits may be subject to price renegotiation, acceptance for use other than for table wine, or rejection by the processors. Discounts for high sugar apply to both base price and bonus unless otherwise stated. There are factors other than Brix, such as material other than grapes (MOG), defects, weight loss in late harvest grapes, and sugar/acid ratios that affect grape prices. These were not considered in this presentation, unless otherwise stated, but were considered in arriving at weighted average prices.

TABLE B - SUPPLEMENT: BRIX ADJUSTMENT FACTORS

The following Brix adjustment factors are on a per degree Brix basis and are normally calculated to a tenth of a degree, and are cumulative unless otherwise indicated. Most processors, however, indicate maximum end/or minimum Brix acceptance limits. Grapes testing above or below these limits may be subject to price renegotiation, acceptance for use other than for table wine, or rejection by the processors. Discounts for high sugar apply to both base price and bonus unless otherwise stated. There are factors other than Brix, such as material other then grapes (MOG), defects, weight loss in late harvest grapes, and sugar/acid ratios that affect grape prices. These were not considered in this presentation, unless otherwise stated, but were considered in arriving at weighted average prices.

TABLE 8 - SUPPLEMENT: BRIX ADJUSTMENT FACTORS

The following Brix adjustment factors are on a per degree Brix basis and are normally calculated to a tenth of a degree, and are cumulative unless otherwise indicated. Most processors, however, indicate maximum and/or minimum Brix acceptance limits. Grapes testing above or below these limits may be subject to price renegotiation, acceptance for use other than for table wine, or rejection by the processors. Discounts for high sugar apply to both base price and bonus unless otherwise stated. There are factors other than Brix, such as material other than grapes (MOG), defects, weight loss in late harvest grapes, and sugar/acid ratios that affect grape prices. These were not considered in this presentation, unless otherwise stated, but were considered in arriving at weighted average prices.

GRAPE CRUSH REPORT OVERVIEW

Information contained in this Report was supplied by processors to fulfill the reporting requirements of Section 55601.5 of the Food and Agricultural Code.

The Preliminary Grape Crush Report includes all grape tonnage crushed during the 1998 season. It also includes purchased tonnage and pricing information for grapes with final prices prior to January 10, 1999. The March 10, 1999 Final Grape Crush Report will include additional purchased tonnage and prices from reference price contracts that were in effect prior to January 1, 1977. In addition, the final report will contain any late reports or corrections to the preliminary report.

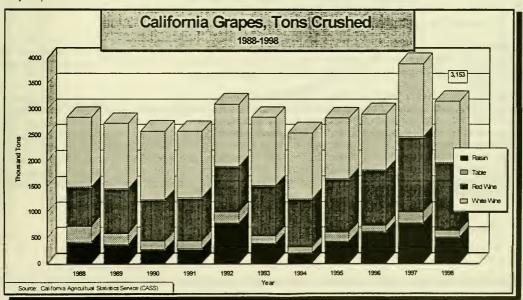

Details of the crushed tonnage, degrees Brix and weighted average prices were reported by grape type and variety, as well as by grape pricing district. The 17 districts refer to the area in which the grapes were grown. A district map is located on the inside of the front cover. Beginning with the 1996 crop year, Mourvedre variety grapes were combined with Mataro variety grapes.

SUMMARY OF GRAPE TONNAGES AND PRICES

The 1998 crush totaled 3,152,654 tons, down approximately 19 percent from the 1997 record high crush of 3,891,403 tons. Red wine varieties accounted for the largest share of all grapes crushed, at 1,321,877 tons, down 10 percent from 1997. The 1998 white wine variety crush totaled 1,189,265 tons, down 17 percent from 1997. Tons crushed for raisin type varieties totaled 506,095, down 36 percent from 1997, while tons crushed for table type varieties totaled 135,417, down 36 percent from 1997. (See chart below.)

California grape growers received prices in 1998 that were generally below the record 1997 prices. Average prices for the 1998 crop were as follows: red wine grapes, \$639.64, down 2 percent from 1997; white wine grapes, \$515.90, down 5 percent; and raisin grapes, \$164.09, down 11 percent. These price levels have not been adjusted for inflation.

Despite the decreased price for raisin, table, and wine type grapes, the 1998 average price of all varieties was \$498.44, up slightly from the 1997 average price. This is due to the fact that in 1998 the higher-priced white and red wine grapes accounted for 80 percent of total grapes crushed, whereas in 1997, the share of wine grapes was only 74 percent.

LEADING GRAPE VARIETIES AND DISTRICTS

Thompson Seedless, a raisin grape variety, continued to account for the largest percentage of crush volume, 16 percent. Chardonnay again accounted for the second leading percentage of crush with 13 percent of the total crush. The remaining top ten were all wine varieties. (See chart, page 3.)

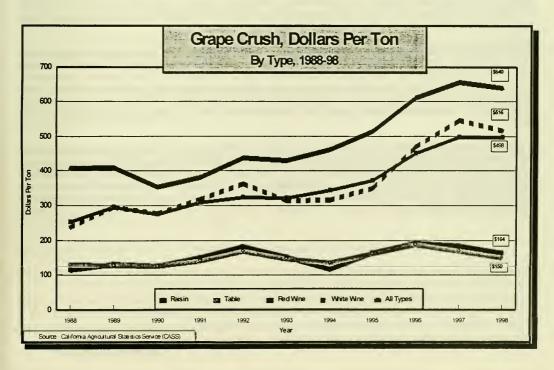

Grapes produced in District 4 (Napa County) received the highest average price of \$1,903.25 per ton, up 11 percent from 1997. District 3 (Sonoma and Marin counties) received the second highest return of \$1,732.44, up 10 percent from 1997. Of the grapes grown Statewide, the top five varieties receiving the highest average price were all wine grape varieties. Petit Verdot received the highest average price of \$2,108.16 per ton. Tannat received the second highest average price of \$1,917.23 1/per ton followed by Teroldego with \$1,828.90 1/per ton, Freisa at \$1,650.00 1/per ton and Pinot Noir at \$1,627.41 per ton. The 1998 Chardonnay price of \$1,083.06 was down 7 percent from 1997, while the 1998 Cabernet Sauvignon price of \$1,179.94 was down slightly from 1997. The 1998 average price for Zinfandel grapes dropped to \$458.39, 9 percent lower than 1997, and 44 percent lower than the 1988 high average price of \$817.48.

1/ These purchases involved less than 100 tons.

EXPLANATION OF TABLES

TABLE 1 is a <u>summary of the 1998 crop State totals</u> by grape type and varieties that are shown in detail by grape pricing districts in Tables 2 through 6. State totals and averages for 1997 are shown for comparison.

TABLE 2 includes <u>over-the-scale fresh tonnage of all grapes crushed</u> by California processors from the 1998 crop. Over-the-scale fresh weight tonnage includes materials other than grapes (MOG) and defects. This table is broken down by the 17 grape pricing districts and by variety. State totals for 1997 are shown for comparison. Crushed tonnage includes <u>all grapes crushed</u> whether: grown and crushed by processors; purchased and crushed by processors; crushed by cooperatives, juice manufacturers, etc.; or crushed for others, including growers.

TABLE 3 shows the <u>weighted average degrees Brix for all grapes crushed</u> (TABLE 2) by California processors from the 1998 crop. The weighted average degrees Brix is reported by grape pricing districts and variety. State averages for 1997 are shown for comparison.

TABLE 4 includes net weight fresh tonnage of all grapes purchased for wine, concentrate, juice, vinegar, and beverage brandy by California processors from the 1998 crop. Net weight fresh tonnage does not include material other than grapes (MOG) and defects or other weight adjustments deducted from gross weight. The purchased tonnage is reported by variety and grape pricing districts. State totals for 1997 are shown for comparison. TABLE 4 does not include tonnage purchased as distilling material other than beverage brandy, this is shown in TABLE 7. Prices for all tonnage shown in this table are final and not subject to change. Grapes pooled by cooperatives, those grown by processors and used for their own production and grapes crushed to growers' accounts are not included.

TABLE 5 shows the <u>weighted average degrees Brix for all grapes purchased for wine, concentrate, juice, vinegar, and beverage brandy</u> (TABLE 4) by California processors from the 1998 crop. The weighted average degrees Brix is reported by grape pricing districts and variety. State averages for 1997 are shown for comparison. TABLE 5 does not include degrees Brix of tonnage purchased as distilling material other than beverage brandy, this is shown in TABLE 7. Grapes pooled by cooperatives, those grown by processors and used for their own production and grapes crushed to growers' accounts are not included.

TABLE 6 gives the <u>weighted average price per ton, delivered basis, of all tonnage purchased for wine, concentrate, juice, vinegar, and beverage brandy</u> (TABLE 4) by California processors from the 1998 crop. The weighted average prices are reported by variety, and grape pricing districts. State averages for 1997 are shown for comparison. TABLE 6 does not include prices of tonnage purchased as distilling material other than beverage brandy, this is shown in TABLE 7. Prices shown in this table are final and not subject to change. Grapes pooled by cooperatives, those grown by processors and used for their own production and grapes crushed to growers' accounts are not included.

Weighted average prices reflect final prices through January 10, 1999 and include any Brix adjustments, bonuses or allowances. Prices from some reference price contracts written prior to January 1, 1977 may be included if settled by January 10, 1999. Prices are equivalent to delivered basis in the area grown including normal within-area hauling allowances. Purchases made on a roadside basis include the usual hauling allowance for local delivery in the area grown. Out-of-area purchases made on a delivered basis do not include extra hauling allowances for delivery outside the area.

The following example indicates the method used for calculating weighted averages:

Combined	1			186 6	20 6	3,841 9	131.1	131.1	20 2	2,648 6	450.0	19.0	25 0	+ or - 10%		22.0	20 0	24 0	385.31	50,514.75

Column 4 was obtained by dividing the total Over the Scale Tons (Column 3) into the Total Brix of these same tons (Column A):

3,841.9
186.6

Column 7 was obtained by dividing the Purchased Tons Only (Column 5) into the Total Brix of these same tons (Column B):

2,648.6 = 20.2

131.1

Column 16 was obtained by dividing the total Purchased Tons Only (Column 5) into the total dollars paid for these same tons (Column C):

\$50,514.75 = \$385.31

131.1

TABLE 7 shows <u>all grape tonnage purchased as distilling material other than beverage brandy</u> by California processors from the 1998 crop. The tonnage, weighted average degrees Brix and price per ton are shown by grape type and variety. State totals and averages for 1997 are given for comparison.

TABLE 8 shows <u>base prices paid to growers</u> by Brix adjustment factors, purchased tonnage, type, variety and reporting district where grown. Weighted average base prices and total purchased tonnage are included.

The Bnx adjustment factors determine adjustments to base prices to compensate for sugar variations. In this report, adjustments are expressed in dollars per ton, or percent of base price per degree variance from the established Bnx base. Occasional lots are traded on price per degree Brix as delivered.

TABLE 9 includes tonnage of all grapes crushed to growers' accounts by California processors from the 1998 crop. Growers retained ownership of these grapes at the time of crushing. This tonnage is reported by grape pricing district and variety. Comparisons with 1997 are shown. (Table 9 only appears in the Final Grape Crush Report.)

TABLE 10 gives the weighted average price per ton, delivered basis, of all tonnage purchased from non-related sources for wine, concentrate, juice, vinegar, and beverage brandy (TABLE 4) by California processors from the 1998 crop. The weighted average prices are reported by variety, and grape pricing districts. State averages for 1997 are shown for comparison. TABLE 10 does not include prices of tonnage purchased as distilling material other than beverage brandy, this is shown in TABLE 7. Prices shown in this table are final and not subject to change. Grapes pooled by cooperatives, those grown by processors and used for their own production and grapes crushed to growers' accounts are not included.

Non-Related Purchased Tons: Excludes tonnage of grapes purchased from a grower if:

- (a) The grower or an affiliate of the grower, or both the grower and the affiliate of the grower, owned, directly or indirectly, at least 5 percent of the indicia of ownership or voting authority of the winery (processor);
- (b) The winery (processor) or an affiliate of the winery, or both the winery and the affiliate of the winery, owned, directly or indirectly, at least 5 percent of the indicia of ownership or voting authority of the grower;
- (c) The winery (processor) or an affiliate of the winery, or both the winery and the affiliate of the winery, provided long-term financing to the grower in exchange for rights or options to purchase a significant portion of the grower's harvest.

See code descriptions in Table 8 - Supplement: Brix Adjustment Factors. Price basis per Degree Brix.

Price per Degree Brix not included in weighted average base price or totals. All prices based on per Degree Brix.

The following Bnx adjustment factors are on a per degree Bnx basis and are normally calculated to a tenth of a degree, and are cumulative unless otherwise indicated Most processors, however, indicate maximum and/or minimum Bnx acceptance limits. Grapes testing above or below these limits may be subject to price renegotiation. acceptance for use other than for table wine, or rejection by the processors. Discounts for high sugar apply to both base price and bonus unless otherwise stated. There are factors other than Bix, such as material other than grapes (MOG), defects, weight loss in late harvest grapes, and sugar/acid ratios that affect grape prices. These were not considered in this presentation, unless otherwise stated, but were considered in arriving at weighted average prices.

DESCRIPTION

The following Bnx adjustment factors are on a per degree Bnx basis and are normally calculated to a tenth of a degree, and are cumulative unless otherwise indicated Most processors, however, indicate maximum and/or minimum Bnx acceptance limits. Grapes testing above or below these limits may be subject to price renegotiation, acceptance for use other than for table wine, or rejection by the processors. Discounts for high sugar apply to both base price and bonus unless otherwise stated. There are factors other than Bnx, such as material other than grapes (MOG), defects, weight loss in late harvest grapes, and sugar/acid ratios that affect grape prices. These were not considered in this presentation, unless otherwise stated, but were considered in arriving at weighted average prices.

The following Bnx adjustment factors are on a per degree Bnx basis and are normally calculated to a tenth of a degree, and are cumulative unless otherwise indicated. Most processors, however, indicate maximum and/or minimum Bnx acceptance limits. Grapes testing above or below these limits may be subject to price renegotation, acceptance for use other than for table wine, or rejection by the processors. Discounts for high sugar apply to both base pnce and bonus unless otherwise stated. There are factors other than Bnx, such as material other than grapes (MOG), defects, weight loss in late harvest grapes, and sugar/acid ratios that affect grape pnces. These were not considered in this presentation, unless otherwise stated, but were considered in arriving at weighted average prices.

FEBRUARY 10, 2000

GRAPE CRUSH REPORT OVERVIEW

Information contained in this Report was supplied by processors to fulfill the reporting requirements of Section 55601.5 of the Food and Agriculture Code.

The Preliminary Grape Crush Report includes all grape tonnage crushed during the 1999 season. It also includes purchased tonnage and pricing information for grapes with final prices prior to January 10, 2000. The March 10, 2000 Final Grape Crush Report will include additional purchased tonnage and prices from reference price contracts that were in effect prior to January 1, 1977. In addition, the final report will contain any late reports or corrections to the preliminary report.

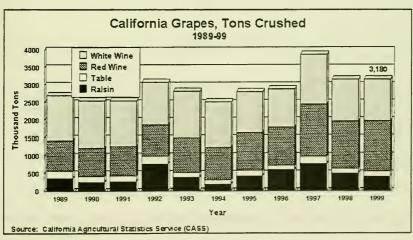

Details of the crushed tonnage, degrees Brix, and weighted average prices were reported by grape type and variety, as well as by grape pricing districts. The 17 districts refer to the area in which the grapes were grown as defined in the Administrative Code. A district map is located on the inside of the front cover. Beginning with the 1996 crop year, Mourvedre variety grapes were combined with Mataro variety grapes.

SUMMARY OF GRAPE TONNAGES AND PRICES

The 1999 crush totaled 3,180,499 tons, up approximately 0.4 percent from the 1998 crush of 3,168,568 tons. Red wine varieties accounted for the largest share of all grapes crushed, at 1,416,939 tons, up 6 percent from 1998. The 1999 white wine variety crush totaled 1,194,928 tons, up slightly from 1998. Tons crushed of raisin type varieties totaled 419,362, down 17 percent from 1998, while tons crushed of table type varieties totaled 149,269, up 10 percent from 1998. (See chart below.)

Beginning this 1999 season, the Grape Crush Report includes the total number of tons crushed that will be marketed as grape concentrate. In determining grape tonnage crushed for concentrate production, each processor was required to report the estimated equivalent tons of grapes crushed that are expected to be marketed as grape concentrate. For the 1999 season, this total was 762,171 tons, nearly one-quarter of the 1999 grape crush total. This report provides only the aggregate figure for grapes crushed for concentrate production and shall not include information by district, type, or variety.

California grape growers received prices in 1999 that were, on average, slightly above the 1998 prices. The 1999 average price of all varieties was \$523.19, up 4 percent from 1998. Average prices for the 1999 crop by type were as follows: red wine grapes, \$647.88, up slightly from 1998; white wine grapes, \$515.86, down slightly; raisin grapes, \$200.32, up 22 percent; and table grapes, \$187.15, up 24 percent. These price levels have not been adjusted for inflation.

LEADING GRAPE VARIETIES AND DISTRICTS

In 1999, Chardonnay accounted for the largest percentage of crush volume, 14 percent. Thompson Seedless, a raisin grape variety, accounted for the second leading percentage of crush with 13 percent of the total crush. The remaining top ten were all wine varieties.

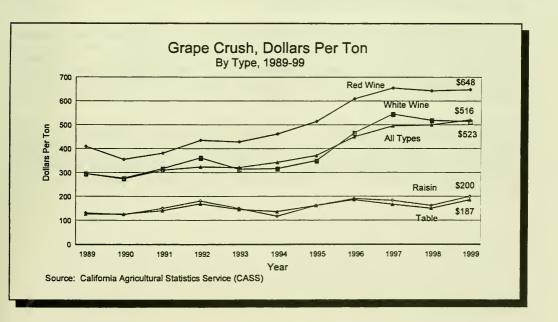

Grapes produced in District 4 (Napa County) received the highest average price of \$2,142.56 per ton, up 12 percent from 1998. District 3 (Sonoma and Marin counties) received the second highest return of \$1,880.66, up 8 percent from 1998. Of the grapes grown Statewide, the top five varieties receiving the highest average price were all wine grape varieties. Scheurebe received the highest average price of \$2,629.89 1/per ton. Petite Verdot received the second highest average price of \$2,159.75 per ton followed by Teroldego with \$1,905.04 1/per ton, Negrette at \$1,847.38 1/per ton, and Malbec at \$1,772.21 per ton. The 1999 Chardonnay price of \$993.31 was down 9 percent from 1998, while the 1999 Cabernet Sauvignon price of \$1,064.78 was down 10 percent from 1998. The 1999 average price for Zinfandel grapes increased to \$493.08, 7 percent higher than 1998.

1/ These purchases involved less than 100 tons.

PERCENT OF TOTAL CRUSH Source: Grape Crush Report

EXPLANATION OF TABLES

TABLE 1 is a <u>summary of the 1999 crop State totals</u> by grape type and varieties that are shown in detail by grape pricing districts in Tables 2 through 6. State totals and averages for 1998 are shown for comparison.

TABLE 2 includes <u>over-the-scale fresh tonnage of all grapes crushed</u> by California processors from the 1999 crop. Over-the-scale fresh weight tonnage includes materials other than grapes (MOG) and defects. This table is broken down by the 17 grape pricing districts and by variety. State totals for 1998 are shown for comparison. Crushed tonnage includes <u>all grapes crushed</u> whether: grown and crushed by processors; purchased and crushed by processors; crushed by cooperatives, juice manufacturers, etc.; or crushed for others, including growers.

TABLE 3 shows the <u>weighted average degrees Brix for all grapes crushed</u> (TABLE 2) by California processors from the 1999 crop. The weighted average degrees Brix is reported by grape pricing districts and variety. State averages for 1998 are shown for comparison.

TABLE 4 includes net weight fresh tonnage of all grapes purchased for wine, concentrate, juice, vinegar, and beverage brandy by California processors from the 1999 crop. Net weight fresh tonnage does not include material other than grapes (MOG) and defects or other weight adjustments deducted from gross weight. The purchased tonnage is reported by variety and grape pricing districts. State totals for 1998 are shown for comparison. TABLE 4 does not include tonnage purchased as distilling material other than beverage brandy, this is shown in TABLE 7. Prices for all tonnage shown in this table are final and not subject to change. Grapes pooled by cooperatives, those grown by processors and used for their own production and grapes crushed to growers' accounts are not included

TABLE 5 shows the <u>weighted average degrees Brix for all grapes purchased for wine, concentrate, juice, vinegar, and beverage brandy</u> (TABLE 4) by California processors from the 1999 crop. The weighted average degrees Brix is reported by grape pricing districts and variety. State averages for 1998 are shown for comparison. TABLE 5 does not include degrees Brix of tonnage purchased as distilling material other than beverage brandy, this is shown in TABLE 7. Grapes pooled by cooperatives, those grown by processors and used for their own production and grapes crushed to growers' accounts are not included.

TABLE 6 gives the <u>weighted average price per ton, delivered basis, of all tonnage purchased for wine, concentrate, iuice, vinegar, and beverage brandy</u> (TABLE 4) by California processors from the 1999 crop. The weighted average prices are reported by variety, and grape pricing districts. State averages for 1998 are shown for comparison. TABLE 6 does not include prices of tonnage purchased as distilling material other than beverage brandy, this is shown in TABLE 7. Prices shown in this table are final and not subject to change. Grapes pooled by cooperatives, those grown by processors and used for their own production and grapes crushed to growers' accounts are not included.

Weighted average prices reflect final prices through January 10, 2000 and include any Brix adjustments, bonuses or allowances. Prices from some reference price contracts written prior to January 1, 1977 may be included if settled by January 10, 2000. Prices are equivalent to delivered basis in the area grown including normal within-area hauling allowances. Purchases made on a roadside basis include the usual hauling allowance for local delivery in the area grown. Out-of-area purchases made on a delivered basis do not include extra hauling allowances for delivery outside the area.

The following example indicates the method used for calculating weighted averages:

Column 4 was obtained by dividing the total Over the Scale Tons (Column 3) into the Total Brix of these same tons (Column A): 3.841.9 = 20.6

186.

Column 7 was obtained by dividing the Purchased Tons Only (Column 5) into the Total Brix of these same tons (Column B):

 $\frac{2.648.6}{131.1}$ = 20.2

Column 16 was obtained by dividing the total Purchased Tons Only (Column 5) into the total dollars paid for these same tons (Column C):

\$\frac{\\$50,514.75}{131.1} = \\$385.31\$

TABLE 7 shows all grape tonnage purchased as distilling material other than beverage brandy by California processors from the 1999 crop. The tonnage, weighted average degrees Brix and price per ton are shown by grape type and variety. State totals and averages for 1998 are given for comparison.

TABLE 8 shows <u>base prices paid to growers</u> by Brix adjustment factors, purchased tonnage, type, variety and reporting district where grown. Weighted average base prices and total purchased tonnage are included.

The Brix adjustment factors determine adjustments to base prices to compensate for sugar variations. In this report, adjustments are expressed in dollars per ton, or percent of base price per degree variance from the established Brix base. Occasional lots are traded on price per degree Brix as delivered.

TABLE 9 includes tonnage of all grapes crushed to growers' accounts by California processors from the 1999 crop. Growers retained ownership of these grapes at the time of crushing. This tonnage is reported by grape pricing district and variety. Comparisons with 1998 are shown. (Table 9 only appears in the Final Grape Crush Report.)

TABLE 10 gives the weighted average price per ton, delivered basis, of all tonnage purchased from non-related sources for wine, concentrate, juice, vinegar, and beverage brandy (TABLE 4) by California processors from the 1999 crop. The weighted average prices are reported by variety, and grape pricing districts. State averages for 1998 are shown for comparison. TABLE 10 does not include prices of tonnage purchased as distilling material other than beverage brandy, this is shown in TABLE 7. Prices shown in this table are final and not subject to change. Grapes pooled by cooperatives, those grown by processors and used for their own production and grapes crushed to growers' accounts are not included.

Non-Related Purchased Tons: Excludes tonnage of grapes purchased from a grower if:

- (a) The grower or an affiliate of the grower, or both the grower and the affiliate of the grower, owned, directly or indirectly, at least 5 percent of the indicia of ownership or voting authority of the winery (processor);
- (b) The winery (processor) or an affiliate of the winery, or both the winery and the affiliate of the winery, owned, directly or indirectly, at least 5 percent of the indicia of ownership or voting authority of the grower;
- (c) The winery (processor) or an affiliate of the winery, or both the winery and the affiliate of the winery, provided long-term financing to the grower in exchange for rights or options to purchase a significant portion of the grower's harvest.

The following Brx adjustment factors are on a per degree Brx basis and are normally calculated to a tenth of a degree, and are cumulative unless otherwise indicated. Most processors, however, indicate maximum and/or minimum Brx acceptance limits. Grapes testing above or below these limits may be subject to price renegotiation, Most processors however, indicate maximum and/or minimum Brx acceptance limits. Grapes testing above or below these limits may be subject to price renegotiation, acceptance for use other than for table wine, or rejection by the processors. Discounts for high sugar apply to both base price and bonus unless otherwise stated. There are factors other than Brx, such as material other than grapes (MOG), defects, weight loss in late harvest grapes, and sugar/acid ratios that affect grape prices. These was not proceeded in the processing of the processing of the processors. were not considered in this presentation, unless otherwise stated, but were considered in arriving at weighted average prices.

TABLE 8 - SUPPLEMENT: BRIX ADJUSTMENT FACTORS

The following Brix adjustment factors are on a per degree Brix basis and are normally calculated to a tenth of a degree, and are cumulative unless otherwise indicated. Most processors, however, indicate maximum and/or minimum Brix acceptance limits. Grapes testing above or below these limits may be subject to price renegotiation, acceptance for use other than for table wine, or rejection by the processors. Discounts for high sugar apply to both base price and bonus unless otherwise stated. There are factors other than Brix, such as material other than grapes (MOG), defects, weight loss in late harvest grapes, and sugar/acid ratios that affect grape prices. These were not considered in this presentation, unless otherwise stated, but were considered in amiving at weighted average prices.

The following Bnx adjustment factors are on a per degree Bnx basis and are normally calculated to a tenth of a degree, and are cumulative unless otherwise indicated Most processors, however, indicate maximum and/or minimum Bnx acceptance limits. Grapes testing above or below these limits may be subject to price renegotiation, acceptance for use other than for table wine, or rejection by the processors. Discounts for his usgra apply to both base price and bonus unless otherwise stated. There are factors other than Bnx, such as material other than grapes (MOG), defects, weight los are histories grapes, and sugar/acid ratios that affect grape prices. These were not considered in this presentation, unless otherwise stated, but were considered in arming at weighted average prices.

TABLE 8 - SUPPLEMENT: BRIX ADJUSTMENT FACTORS

The following Brix adjustment factors are on a per degree Brix basis and are normally calculate to a tenth of a degree, and are cumulative unless otherwise indicated. Most processors, however, indicate maximum and/or minimum Brix acceptance limits. Grapes testing above or below these limits may be subject to price renegotiation, acceptance for use other than for table wine, or rejection by the processors. Discounts for high sugar apply to both base price and bonus unless otherwise stated. There are factors other than Brix, such as material other than grapes (MOG), defects, weight loss in late harvest grapes, and sugar/acid ratios that affect grape prices. These were not considered in this presentation, unless otherwise stated, but were considered in arriving at weighted average prices.
